Abstract

Covid-19 has posed bizarre challenges for all over the world including India. Though the number of patients suffering with Covid-19 is small compared to many other countries, still the Covid-19 has smacked the already going on scuffle with unemployment and malnutrition in India. The human race slept in a different world and woke up in a world affected and feared with Covid-19. No one was prepared for such a pandemic. The hasty multiplication of corona virus affected patients changed the world massively. By the time its horrific effect is realized, it has already spread world over. Though, the effect of Covid -19 is not time bound or geographically limited but its impact on mankind, livelihoods, health and mindsets is going to be everlasting.
